Build a simple Laravel Project for saving notes

the project should include

- Login, Register screens

- home screen contains a list of saved notes

- add note screen(content, type)[type = urgent,normal,on date]

- able to attach image with the note **(not required but optional)**

- ability to edit and delete the note **(soft delete)**

- build API **(mobile friendly)** for getting all posts add, edit and delete

- **(extra points)** to generate a public link where the user can share his note to others, note: other users can only view the note without the need to login or register

- Generate report that contains the number of notes by its type for every user
